NA1-PK5/5 SERIES

Ultra-slim Body Picking Sensor

10 mm 0.394 in thick: half the thickness of conventional models

Space savings now possible; ultra-thin design does not obstruct picking operations.

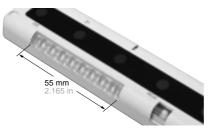

Clearly visible job indicator

Bright, easy-to-see job indicators, 55 mm 2.165 in length, have been incorporated into both the emitter and the receiver. This sensor is optimal for picking. With the **NA1-PK5**, we've enhanced visibility even further by using 8 orange LED lights.

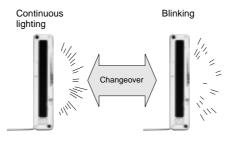

Long sensing range: 3 m 9.843 ft NA1-5

Its long sensing range of 3 m 9.843 ft is sufficient for confirming access to a parts shelf. Further, if the sensor has been set to the Light-ON mode, the output is turned OFF should the cable break.

Lighting pattern selectable

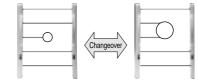

The job indicator operation can be selected as either continuous lighting or blinking.

Selectable detection operation

Either of two different detection operations may be selected, in order to best suit the particular application. Sensor units can be set to detect the interruption of 1 or more beam channels, or can be set to detect only the interruption of 2 or more beam channels.

Single beam interruption Double beam interruption

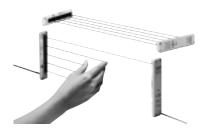

All opaque bodies with ϕ 35 mm ϕ 1.378 in or greater will be detected.

The accidental passage of small objects through the beam axis will not trigger detection, yet the operator's hands will always be accurately detected. This function is also useful when small objects regularly interrupt the beam axis.

Cable can be freely arranged in any position

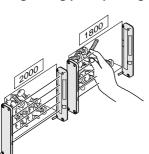

Two unit installations are possible

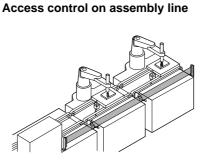

Sensor units can now be set to different light emission frequencies, in order to prevent mutual interference. Two units can now be operated in a side-by-side configuration without interference, for problem-free detection over wider areas.

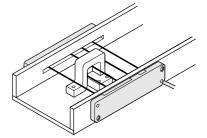

APPLICATIONS

Preventing wrong parts picking

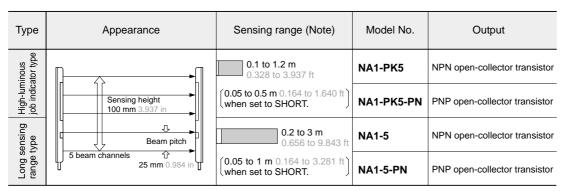

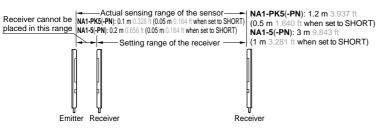

WARNING Never use this product in any personnel safety application.

ORDER GUIDE

Note: The sensing range is the possible setting distance between the emitter and the receiver. NA1-PK5(-PN) can detect an object less than 0.1 m 0.328 ft (0.05 m 0.164 ft when set to SHORT) away. NA1-5(-PN) can detect an object less than 0.2 m 0.656 ft (0.05 m 0.164 ft when set to SHORT) away.

5 m 16.404 ft cable length type, pigtailed type

5 m 16.404 ft cable length type (standard: 2 m 6.562 ft) and pigtailed type (standard: cable type) are also available.

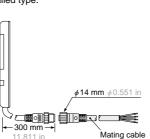

Table of Model Nos.

Туре	Standard type	5 m 16.404 ft cable length type	Pigtailed type (Note)
High-luminous job indicator type	NA1-PK5		NA1-PK5-J
High-lur job indi type	NA1-PK5-PN		NA1-PK5-PN-J
Long sensing range type	NA1-5	NA1-5-C5	NA1-5-J
	NA1-5-PN		NA1-5-PN-J

Note: Please order the suitable mating cable separately for pigtailed type.

Mating cable (2 cables are required.)

SHORT) away, **NA1-5(-PN)** can detect an object less than 0.2 m 0.656 ft (0.05 m 0.164 ft when set to SHORT) away. 2) Obtain the current consumption by the following equation.

 $\label{eq:current} \textit{Current consumption} = \textit{Power consumption} \div \textit{Supply voltage}$ (e.g.) When the supply voltage is 12 V,

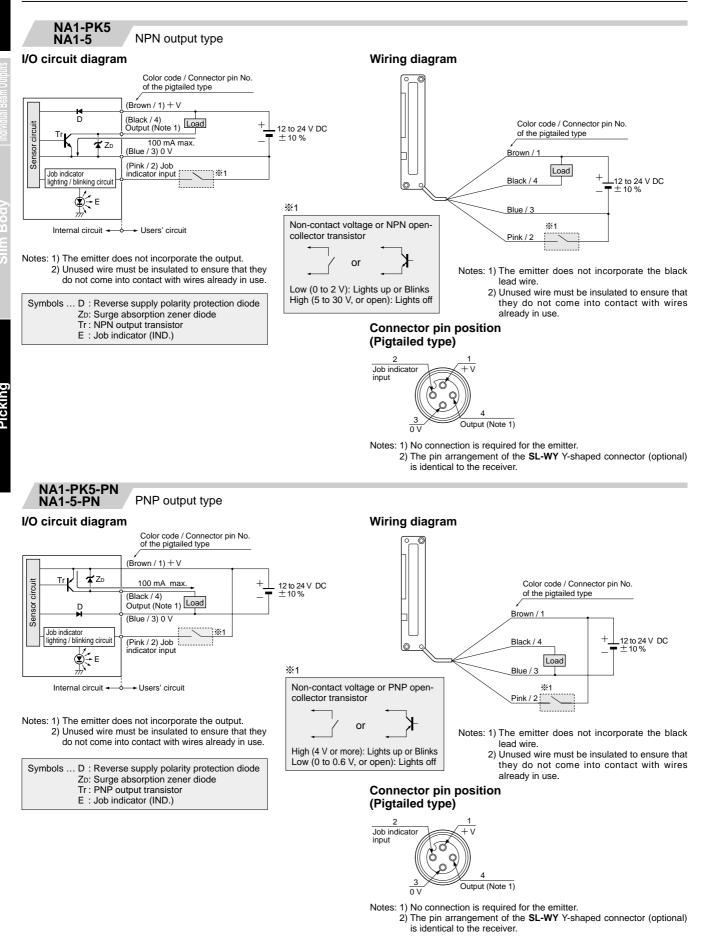

the current consumption of the emitter is: $0.5 \text{ W} \div 12 \text{ V} \rightleftharpoons 0.042 \text{ A} = 42 \text{ mA}$

PRECAUTIONS FOR PROPER USE

- Never use this product as a sensing device for personnel protection.
- For sensing devices to be used as safety devices for press machines or for personnel protection, use products which meet standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.
- If this product is used as a sensing device for personnel protection, death or serious body injury could result.
 - For a product which meets safety standards, use the following products.
 - Type 4: SF4-AH series (p.420~) SF2-EH series (p.486~) Type 2: SF2-A series (p.446~) SF2-N series (p.464~)

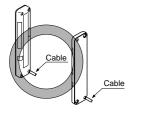

Mounting

- Use M4 screws with washers and M4 nuts. The tightening torque should be 0.5 N·m or less.
 - (Please arrange the screws and nuts separately.)

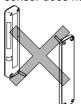

Orientation

• The emitter and the receiver must face each other correctly. If they are set upside down, the sensor does not work.

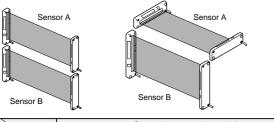

542 sunX

Interference prevention function

• By setting different emission frequencies, two units of the sensor can be mounted close together, as shown in the figure below.

The switches must be set with the power supply off. The operation mode does not change if the switch setting is changed with the power supplied.

	Operation mode switch		
	Emitter	Receiver	
Sensor A (FREQ. A)	FREQ. A FREQ. B	FREQ. A FREQ. B	
Sensor B (FREQ. B)	FREQ. A FREQ. B	FREQ. A FREQ. B	

LONG / SHORT selection switch (incorporated on the emitter)

Refer to p.1135~ for general precautions.

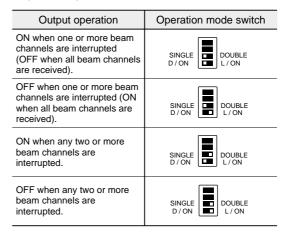

• Select the switch setting according to the setting distance between the emitter and the receiver as given below. (The switches must be set with the power supply off. The operation mode does not change if the switch setting is changed with the power supplied.

Setting distance	Operation mode switch
0.05 to 0.5 m 0.164 to 1.640 ft [NA1-PK5(-PN)] 0.05 to 1 m 0.164 to 3.281 ft [NA1-5(-PN)]	
0.5 to 1.2 m 1.640 to 3.937 ft [NA1-PK5(-PN)] 1 to 3 m 3.281 to 9.843 ft [NA1-5(-PN)]	

Selection of output operation

• The output operation mode is selected by the operation mode switch on the receiver.

The switches must be set with the power supply off. The operation mode does not change if the switch setting is changed with the power supplied.

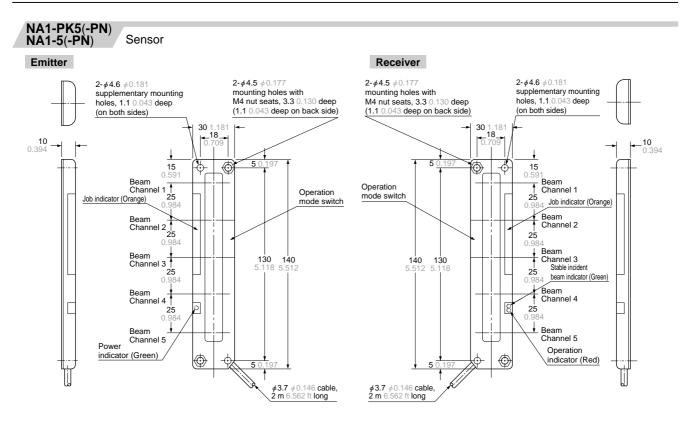

Job indicator operation selection

- Lighting / Blinking is selected by the operation mode switch on the emitter and the receiver.
- The switches must be set with the power supply off. The operation mode does not change if the switch setting is changed with the power supplied.

	Operation mode switch		
	Emitter	Receiver	
Lighting	LIGHT FLASH	LIGHT FLASH	
Blinking	LIGHT FLASH	LIGHT FLASH	

Others

• Do not use during the initial transient time (0.5 sec.) after the power supply is switched on.
